

Shaping Authentic Practices by Engaging in Modeling of A Topic with Teachers to Explore Research in Science (SHAPE MATTERS)

June 21 - July 2, 2021
Monday - Friday, 9 AM - 4PM

Deadline to apply: April 18, 2021

[Apply now!](#) >

SHAPE MATTERS is a 10-day summer professional development workshop that will include in-person and virtual activities for Pennsylvanian secondary life science and chemistry teachers in collaboration with science education faculty from the Center for Science and the Schools (CSATS) and research scientists from the Penn State College of Medicine and the Eberly College of Science. Teachers will engage in techniques such as crystallization, structure determination, and modeling using the molecular visualization software, Jmol to explore molecular stories related to human health. Teachers will work with the SHAPE MATTERS team to co-construct a molecular modeling research project for their classroom. The research project will support student participation in the SMART teams program.

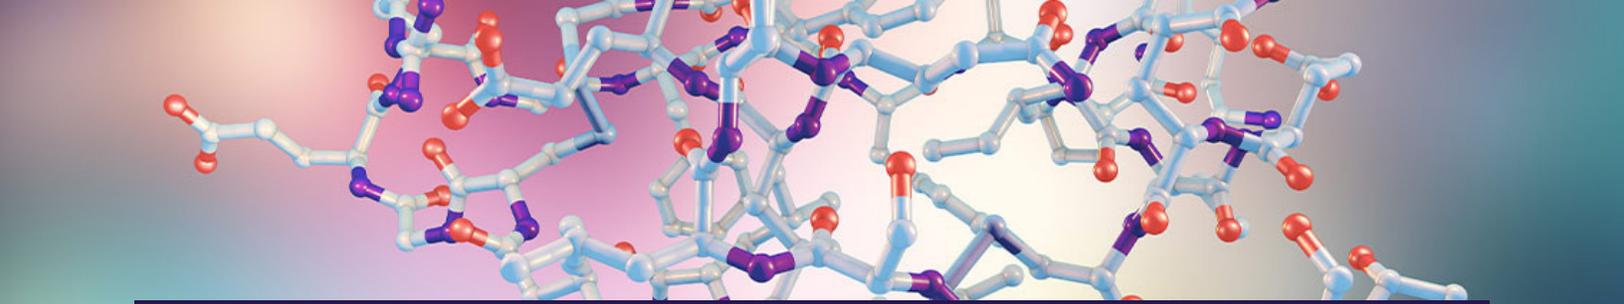

Participant Benefits:

- A \$600 stipend for participating during the summer
- A \$1,500 stipend for implementation of a molecular modeling research project in the classroom
- Over \$2,000 of lab and molecular modeling materials for the classroom
- Invitation to bring students to present molecular modeling projects at the SMART teams symposium
- Act 48 credit is available upon request

SEPA SCIENCE EDUCATION
PARTNERSHIP AWARD
SUPPORTED BY THE NATIONAL INSTITUTES OF HEALTH

This publication is available in alternative media on request. Penn State encourages qualified persons with disabilities to participate in its programs and activities. If you anticipate needing any type of accommodation or have questions about the physical access provided, please contact kathyhill@psu.edu in advance of your participation or visit. Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status. U.Ed. EDU 21-55.

Academic Standards

Next Generation Science Standards:

- **HS-LS1-1** Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins which carry out the essential functions of life through systems of specialized cells
- **HS-LS1-2** Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms
- **HS-PS1-2** Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties
- **HS-PS2-6** Communicate scientific and technical information about why the molecular-level structure is important in the functioning of designed materials

Keystone Eligible Content:

- **BIO.A.2.2.2** Describe how biological macromolecules form from monomers.
- **BIO.A.2.3.2** Explain how factors such as pH, temperature, and concentration levels can affect enzyme function.
- **BIO.B.2.3.1** Describe how genetic mutations alter the DNA sequence and may or may not affect phenotype (e.g., silent, nonsense, frame-shift).

PA Science and Technology Standards:

- **3.3.10.B.** Describe and explain the chemical and structural basis of living organisms.
- **3.4.10.A.** Explain concepts about the structure and properties of matter.
- **3.7.10.A.** Identify and safely use a variety of tools, basic machines, materials and techniques to solve problems and answer questions.
